

Test Cases - Team 007

Purpose

This document lists the various test cases that will be executed to verify the implantation of the coffee cart rewards system developed for the LameDucks coffee in Atlanta, GA.

The mode of testing will be manual. After the development of the system, testers will take the test cases below and log the results in the actual results after comparison with the expected result. If a particular operation fails, then the Tester will log a **Pass** or a **Fail** for that test step. If a test step fails, then the test is considered failed.

Any additional details that will be helpful to the developers to fix the problem will be described in the comments section. A corresponding issue will be raised in the github.com system to log the issue. Github.com is the primary source of maintaining issues found during testing.

Test cases.

Test Case 1: Add Customer

Test Steps	Expected Result	Actual Result	Tester	Pass/Fail	Comments
Select Account Management from Main Menu	Account Management Menu is displayed				
Enter Customer Name	Customer name is accepted
